

## Protection Jammer Tester

Efficient and fast testing  
for man pack, vehicle and  
convoy jammer

SPHEREA

# Protection Jammer Tester

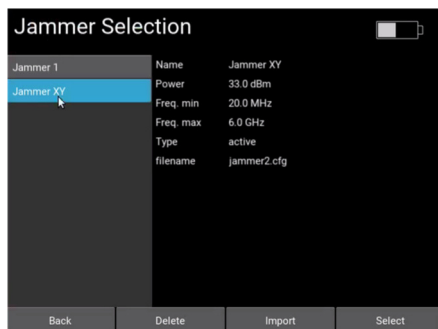

**The Protection Jammer Tester (PJT) is used for testing the functioning of Radio Frequency (RF) jammer systems.**

The simple design and operation allows the user to quickly and efficiently verify that the tested active, re-active or hybrid jammer system is performing as expected. The function tests answers two different questions: are the frequencies, programmed in the jammer system, jammed and is the power emitted by the jammer as expected. This highly efficient and reproducible verification of jammer systems puts an end to the evaluation of measurement results on spectrum analyzers and the associated interpretation of measurement results!

## Safety for the crew

- Real parametric test (Results on frequency and power)
- Any jammer type or operating mode (active, re-active, hybrid)
- Wide frequency range from 20 - 6,000 MHz
- Reproducible measurement results across different test systems
- Mobile test system - autonomous operation with rechargeable battery
- Ease of operation
- Short test time
- User programmable
- Mil grade

Jammer Selection

Test passed

UIT	S/N	Date	Result
Jammer XY	1001	15.03.2018 14:39	Pass
Jammer XY	1001	15.03.2018 14:34	Aborted
Jammer XY	1001	15.03.2018 14:32	Aborted
Jammer 2	1002	15.03.2018 14:11	Pass
Jammer 2	1002	15.03.2018 14:08	Aborted
Jammer 2	1002	15.03.2018 13:55	Pass
Jammer 2	1002	15.03.2018 13:09	Pass
Jammer 2	1002	15.03.2018 13:06	Pass

Database with test reports

## Application Area

The Protection Jammer Tester has been designed according to standard military specifications. It is suitable for outdoor use and operation in harsh conditions.
